

# Pepper and soap experiment

from [kidonecamps.com/post/pepper-free](http://kidonecamps.com/post/pepper-free)

You will need: Washing up liquid, a large dish, water, pepper, and a cotton bud.

1. Fill the dish with water, just enough to cover the whole bottom of the dish.

3. Soak a cotton swab in washing up liquid.

2. Shake pepper all over the surface of the water, but don't mix it in.

4. Dip your cotton swab into the middle of the dish. Watch what happens.
